

AM323

Silicon Sand Acoustic Sound Absorbing Art Panel for Home Theater

Description

The AM323 is a silicon sand acoustic sound-absorbing art panel designed for high-performance acoustic treatment in home theater environments. It combines excellent sound absorption capability with a durable, decorative surface, offering both functional and aesthetic value. With Class A fire resistance, moisture protection, and long-term stability, it is suitable for demanding interior applications. Its customizable patterns and easy wall-mounted installation make it an ideal solution for modern acoustic design projects.

Features

- Sound Absorption Class 1, excellent sound absorption performance
- Natural granular surface, easy to clean, and can be repainted with special coating for renovation
- Non-combustible, Class A fire-resistant
- Moisture-proof and water-proof, no surface whitening
- Ultra-durable with a service life of up to 30 years
- Partial wall-hung installation, simple operation and low installation cost
- Beautiful surface patterns with customizable options
